

Friendly Forest Products are "functional art products and wood furniture pieces" created by Gerald Regnitter. Products are conceived and designed to meet some utilitarian purpose and to be objects of beauty at the same time. Product Models usually began as a solution to a special problem or request, or as a unique gift for someone special. Original items, when seen by others, led to requests for variants or additional items. The challenge of designing and creating new products is a good part of the pleasure of working with wood. Custom design items range from custom furniture for special needs children, or a very special storage box made of woods from Africa to protect and hold an African soapstone chess set and board, to unique baby cradles and special game boards.

Contact me to discuss the creation of a special product that you can't find elsewhere. Personal viewing of items currently in my studio or home is also possible by arrangement.

Go to my web site to see the kinds of things I make and other things that are part of my life at Friendly Forest.
